

I urge you to reconsider the implementation of BPL. I note that as of today, there are over 50 cases of RFI to amateur radio operators. It is obvious that this number will grow as more BPL implementations occur. Sweeping these complaint filings under the rug will not make them go away. It is clear that if FCC rules regarding Part15 devices are not enforced in regards to BPL violations, then those suffering RFI from it will switch to the court system for a remedy. This is just the tip of the iceberg. Neither the FCC, nor the HF spectrum users need go through this if the problem is corrected at an early stage.

I also wish to comment that I believe there is no need for BPL, anyway. The ever increasing number of DSL and wireless providers will continue to provide more customers with broadband, not to mention more satellite internet providers about to come on line.

Please, do not let politics interfere with a decision to terminate this problem before it gets worse. No one can gain from this.

Thank you.
